## suggestion 2

### TEXT WRAPPING IN THE METADATA PANE

An option of text wrapping for metadata in Details View and Metadata View would allow for much easier browsing and editing of metadata?

*Details View as it currently is, where for larger amounts of metadata you have to expand the column to view all metadata in the column.*

Name ▾	Rating	Comments	Tags	Size	Type
 Document 1.docx		this document was created 201...	text=y; images=y; font=Times N...	12.6 KB	DOCX File
 Document 2.docx		this document was created 201...	text=y; images=n; font=Arial 12...	12.6 KB	DOCX File

Name ▾	Rating	Comments	Tags
 Document 1.docx		this document was created 2011.07.021W; not completed; font is Times New Roman 10; has images	text=y; images=y; font=Times New Roman 10; textcol=beige; subj=
 Document 2.docx		this document was created 2012.05.08Tu; completed; font is Arial 12; does not have images	text=y; images=n; font=Arial 12; textcol=black; subj=history; compl

*Details View as it would look if it had text wrapping.*

The option for text wrapping could be controlled by a command that could appear as an icon in the page-top menu and additionally could appear in the right click menu. I think you would want to be able to collapse the text wrapping for displaying files close together.

Another way of controlling this option would be to have small icons or boxes to the left of each file that you could select or de-select to expand or collapse the metadata for individual files.

A recap of my suggestions:

- 1: having metadata search, replace, append functionality
- 2: text wrapping of metadata in details view and the metadata pane

Kind regards,

**Anthony Kranjc**
